This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

LIBRARY BOOKS FOR HIGH SCHOOLS.

INTRODUCTION.

This list is based on the Minnesota school library list, Books for High Schools, 1913–14. The number of titles has been materially increased to include the suggestions of many high-school teachers, specialists in the Bureau of Education, high-school librarians, public librarians, and commission workers.

The suggestions and demands of teachers of special departments for comprehensive lists on particular subjects have been somewhat insistent, and the result is that some divisions, notably agriculture, are out of proportion to the rest of the list.

The effort has been to provide a thoroughly standard list of tested books for a foundation library, to include as much fresh material as possible, and to suggest books of interest and value to pupils of the high-school age. Some of the titles given are felt to be rather advanced for such use. They are included at the suggestion of experienced teachers and doubtless with the guidance of such teachers are valuable for reference.

The list is planned to be of general usefulness, but schools will wish to supplement it for purely local material. More titles of general interest are included than are needed in a high-school library in a town where there is a good public library, and where the high-school library may properly be limited to books commonly used in connection with the work and life of the school. Many towns with high schools are lacking in adequate public library facilities, and the high-school library must provide books for home reading.

Arrangement of the list.—The list is classified according to a modification of the Dewey decimal classification, differing from the Minnesota List, 1913–14, in being more detailed. For the most part, the second summary of the Dewey decimal classification is used. For divisions in which the schools are apt to have many books, or where the use indicates subdivisions, more detailed classification is given. In adapting this classification to a particular school, having a considerable collection of books, comparison with the abridged decimal classification is recommended.

After due consideration of classification adaptations used in high-school libraries, experience in organization of high-school libraries,
